SUMMARY

Senior Software Test Engineer with **4 years of experience** in Manual, Automation, API, and Performance Testing across Web and Mobile applications (Android & iOS). Strong expertise in designing, developing, and maintaining automation frameworks using **Selenium WebDriver (Java), Playwright, Nightwatch.js, and Appium**. Experienced in API testing using **Postman** and performance/load testing using **Apache JMeter**. Hands-on experience in CI/CD pipelines using **Jenkins, Azure DevOps, Docker, and Rancher**. Proficient in developing test strategies, designing test scenarios, executing end-to-end testing, identifying defects, and ensuring application quality. Strong understanding of Agile-Scrum, SDLC, STLC, and defect lifecycle management, with experience across Healthcare, Mortgage Finance, Logistics, Business Intelligence domains.

PROFILE SUMMARY

- I have **4 years** of experience in both **Manual Testing** and **Automation Testing.**
- Involved in various types of testing including **Functional** Testing, **UI** Testing, **Smoke Testing**, **Sanity** Testing, Retesting, **Regression** Testing, **API** Testing, and **Performance** Testing.
- Experience in **Web** and **Mobile** Testing **(iOS & Android)**, executing test cases on real devices, **BrowserStack** cloud platforms, and **simulator** environments.
- Hands-on experience in **Automation Testing** using **Selenium WebDriver**, **Playwright**, **Nightwatch.js**, and **Appium** for **web** and **mobile** applications.
- Experience in automation framework development using Page Object Model (**POM**), **Cucumber** (BDD), **TestNG**, **JUnit**, and Data-Driven Testing frameworks.
- Strong experience in API testing using **Postman**, **REST APIs**, JSON validation, request/response validation, and backend integration verification.
- Hands-on experience in **performance** and **load** testing using **Apache JMeter** to validate application stability, throughput, and response time under concurrent user loads.
- Experience in identifying web and mobile elements using **XPath**, **CSS** Selectors, and mobile locators.
- Proficiency in **Agile-Scrum methodology** with active participation in sprint planning, daily stand-ups, sprint reviews, and retrospectives.
- Skilled in Test Case Design, Test Execution, Bug Tracking, Defect Reporting, and Release Validation.
- Hands-on experience with **CI/CD pipelines using Azure DevOps**, **Jenkins**, **Docker** containers, and **Rancher** job monitoring.
- Experience using tools such as IntelliJ IDEA, **Gradle**, **Git**, **Azure DevOps**, **Jira**, **BrowserStack**, and Postman.
- Strong understanding of **SDLC** and **STLC** processes.
- Experience working across multiple business domains including **Healthcare**, **Mortgage** Finance, **Logistics**, **Business** Intelligence applications.

SKILLS

Mobile Testing:
Android, iOS, BrowserStack, Real Device Testing, Simulator Testing

Test Automation:
Selenium WebDriver, Playwright, Nightwatch.js, Appium, TestNG, JUnit, Cucumber (BDD), Data-Driven Testing, Page Object Model (POM)

API Testing:
Postman, REST APIs, JSON Validation, Request/Response Validation, Backend Integration Testing

Performance Testing:
Apache JMeter (Load Testing & Performance Testing)

Test Management:
Azure DevOps, Jira, Zoho, Clickup, Bugasura

Build & CI/CD Tools:
Azure DevOps, Jenkins, Gradle, Docker, Rancher

Version Control:
Git

Languages:
Core Java, JavaScript, Gherkin

Operating Systems:
Windows, macOS

Domain Experience:
Healthcare, Mortgage Finance, Logistics, Business Intelligence

EDUCATION

Bachelor of Engineering (EEE), **Sree Sastha Institute of Engineering and Technology**, Chennai.

WORK EXPERIENCE

- **(Client:** Jaguar**– Omega Healthcare)** from **Oct 2022 to Jul 2024.**
- **(Client:** Mr. Cooper **– Piquota) | Jan 2025 – Present**

PROJECT DETAILS

PROJECT - 1 JAGUAR (HEALTHCARE)

Team Size: 8 Members

Test Approach: **Manual Testing and Automation Testing**

Project Description

Jaguar application is used for Denial Management and Billing Management in the Healthcare domain at Omega Healthcare. It primarily handles the processing, validation, and verification of EOBs (Explanation of Benefits) and ENVs (Electronic Notification Versions), ensuring accurate healthcare claim processing and billing workflows.

Roles & Responsibilities

- Analyzed user stories, business requirements, and acceptance criteria to prepare detailed test scenarios and test cases.
- Created and maintained test data using feature files and supporting **test documentation**.
- Reviewed **test scenarios** and identified **test cases** for both **manual** and **automation testing**.
- Designed and developed automation scripts using **Selenium WebDriver** with **Java** and **Cucumber** (BDD) **framework**.
- Implemented automation framework using Page Object Model (POM) for maintainability and reusability.
- Identified web elements using **XPath**, **CSS Selectors**, and **dynamic locator** strategies for automation implementation.
- Executed **Functional Testing**, **UI** Testing, **Regression** Testing, **Smoke** Testing, **Sanity** Testing, Retesting, and **End-to-End** workflow validation.
- Performed regression test suite execution and analyzed automation results to ensure application stability.
- Validated **XML** and **JSON** request/response payloads using **JSON** Path and **API** endpoint verification.
- Performed API testing to validate backend integration workflows and healthcare transaction data.
- Identified, logged, tracked, and verified defects using **JIRA** throughout the defect lifecycle until closure.
- Worked closely with developers, business analysts, and QA team members for issue analysis and defect resolution.
- Participated in Agile-Scrum ceremonies including Sprint Planning, Daily Stand-ups, Sprint Reviews, and Retrospectives.
- Prepared **weekly** and **monthly test execution reports** and provided status updates to project managers and stakeholders.
- Performed **data validation** and workflow verification for **healthcare billing** and **denial management** processes.
- Used **Git** for **source code** management, **version control**, and automation code collaboration.

PROJECT – 2 ZOSALUS

Team Size: **3** Members
Test Approach: Manual Testing and Automation Testing

Project Description

Zosalus is a pet healthcare application designed to manage pet medical records, veterinary documents, medications, allergies, and health information. The application enables pet owners to upload and manage veterinary documents, extract medical information using OCR technology, and maintain centralized health records for their pets.

Roles & Responsibilities

- Performed functional, UI, and regression testing of the Zosalus web and mobile applications.
- Tested pet profile management and pet health record functionalities.
- Validated document upload, document categorization, and pet assignment workflows.
- Tested OCR-based veterinary document processing and extracted data validation.
- Verified OCR review workflows, including extracted information and manual corrections.
- Tested email-based document ingestion and inbound email processing.
- Validated document source tracking and document management functionalities.
- Tested medication management, including medication details, dosage, frequency, and schedules.
- Tested pet allergy management and medication-allergy interaction warnings.
- Validated health records, vital signs, and medical history functionalities.
- Tested document filtering, downloading, metadata, and sharing functionalities.
- Performed mobile testing on iOS and Android devices, including native share extension and Android Share Intent.
- Performed API testing using Postman to validate backend responses and data consistency.
- Identified, documented, and tracked defects using project management tools.
- Collaborated with developers to reproduce issues, validate fixes, and perform regression testing.

PROJECT - 3 MR. COOPER

Team Size: 10 Members
Test Approach: Automation Testing

Project Description

Mr. Cooper is a leading mortgage servicing platform that provides customers with a seamless way to manage their home loans through web and mobile applications (iOS & Android). The application enables users to make payments, view loan details, set up autopay, update account settings, and track their mortgage journey.

Roles & Responsibilities

- Performed **Automation testing** for multi-brand **web** and **mobile applications** across **QA**, **UAT**, and Production environments.
- Designed, reviewed, and executed test cases for Functional, UI, Regression, Smoke, and Sanity Testing.
- Developed and maintained automation **test scripts** using **Playwright**,(**JavaScript**), **Selenium**, and **Appium** (**Java**).
- **Followed Page Object Model (POM) best practices for scalable automation framework design.**
- Executed automation tests inside **Docker containers** as part of **Azure DevOps CI/CD pipelines**.
- Validated application behavior across multiple devices and OS versions using **BrowserStack** for **iOS** and **Android testing**.
- Performed API testing using **Postman** to validate backend services, request/response payloads, and integration flows.
- Worked with brand-specific configurations, environment variables, and secrets for scalable automation support.
- Actively monitored **Rancher jobs** and **pod logs** to analyze automation failures and deployment issues.
- Used **XPath**, **CSS** Selectors, and mobile locators to identify UI elements efficiently.
- Managed automation projects using IntelliJ IDEA, Gradle, and Git.
- **Identified, logged, and tracked defects in Azure DevOps with clear reproduction steps.**
- Participated in Agile ceremonies including Daily Stand-ups, Sprint Planning, Sprint Reviews, and Retrospectives.
- Collaborated with **business analysts**, **developers**, **DevOps**, and product teams to improve **product quality**.
- Prepared **test execution reports** and **communicated testing** status updates.
- Maintained **automation framework** utilities and **reusable test components** for efficient execution.

PROJECT - 4 IMMUNOTRACK

Team Size: 5 Members
Test Approach: Manual Testing, Automation Testing, Performance Testing

Project Description

ImmunoTrack is a healthcare application designed to streamline immunization workflow management, patient record tracking, clinical validations, and healthcare process automation. The application enables healthcare providers to manage immunization schedules, validate patient workflows, monitor healthcare operations, and ensure seamless data integrity across integrated systems.

Roles & Responsibilities

- Performed manual and automation testing for healthcare web applications across **Render**, **QA**, **UAT**, and staging environments.
- **Designed, reviewed, and executed test cases for Functional, UI, Regression, Smoke, Sanity, and End-to-End workflow testing.**
- Developed and maintained automation scripts using **Selenium WebDriver** with Java following Page **Object Model (POM)** framework standards.
- Performed API testing using Postman to validate backend healthcare services, API integrations, request/response payloads, and data consistency.
- Executed **performance** and **load testing** using **Apache JMeter** to validate application stability, response times, throughput, and concurrent user handling.
- Conducted **browser/device simulation** testing to validate workflows before production validation.
- Validated healthcare workflows, patient data processing, business rules, and **end-to-end** operational flows.
- Performed **requirement analysis** and impact analysis for enhancements, **defect fixes**, and release changes.
- Prepared detailed test scenarios, test cases, test data, execution reports, and release validation summaries.
- Maintained **reusable regression test** suites for repeated release validation cycles.
- Validated frontend and backend integration workflows to ensure seamless data processing.
- Performed **compatibility testing** across supported **browsers** and **environments**.
- Validated exception handling, error messages, and edge-case healthcare workflow scenarios.
- Identified, logged, tracked, and verified defects using **Jira** / **Azure DevOps** throughout the defect lifecycle.
- Participated in defect triage meetings to **prioritize** and resolve critical issues.
- Worked closely with developers, business analysts, QA teams, and stakeholders to validate requirements and fixes.
- Used **XPath**, **CSS Selectors**, and **dynamic locators** for **automation implementation**.
- Assisted business teams during UAT validation and issue verification.
- Performed release readiness validation and post-deployment **smoke testing** activities.

PROJECT - 5 TRAXXIA

Team Size: 3 Members
Test Approach: Manual Testing, Automation Testing, Performance Testing

Project Description

Traxxia is a business intelligence and analytics platform designed to support strategic business growth, reporting, workflow analysis, opportunity discovery, and decision-making through interactive dashboards and analytics workflows.

Roles & Responsibilities

- Performed manual and automation testing for business intelligence web applications across **Render**, **QA**, **UAT**, and staging environments.
- Designed and executed test cases for Functional, UI, Regression, Smoke, Sanity, Dashboard Validation, and **end-to-end** workflow testing.
- Developed automation scripts using **Playwright** and **Nightwatch.js** (**JavaScript**).
- Performed **API testing** using **Postman** for backend validation and authentication workflows.
- Executed **Load** and **Performance Testing** using Apache **JMeter**.
- Validated dashboard responsiveness, analytics calculations, filters, reports, and executive summary workflows.
- Verified **business rules**, recommendation logic, **prioritization** workflows, and analytics outputs.
- Identified, logged, and tracked defects in Azure DevOps.
- Worked with deployment validation, environment configuration, and release verification.
- Used **XPath**, **CSS** Selectors, and dynamic locators for automation maintenance.
- **Participated in Agile ceremonies and collaborated with developers, stakeholders, and QA teams.**
- Performed **regression** and **smoke validation** after deployments.

DECLARATION

I declare that the information provided above is true to the best of my knowledge.
